

AC 14 analog

Introduction

Get Started

Connect the plug at the end of the power supply into the socket labelled with the power symbol () until you hear it click.

Connect one end of the analogue connection cable into the socket labelled "AMT" until you hear it click in place.

Connect the other end of the cable to the socket of the network provider or the installed socket.

Connect the plugs of your telephone equipment to the telephone system.

The default setting of the AC 14 analog is that the first connection is extension 11 and the second connection is extension 12.

Plug the power supply into the 230V main socket. The red LED will flash while initialising and then light up.

To enter your phone number, see below.

You now can make calls. After lifting the telephone receiver you will hear the dial tone of the telephone exchange.

An incoming call will ring extension 11, 12, 13 and 14.

Introduction

Important Notes On Using Analogue Equipment

Only analogue apparatus which are approved to be connected to the Public Switched Telephone Network (PSTN) may be connected to the analogue side of the system. This includes all 2 wire telephones, answering -, fax machines, and modems.

The system supports both dialling method Loop Disconnect (LD) or Dual Tone Multi Frequency (DTMF). DTMF is a faster dialling method. The system will dedect the dialling method automatically.

From an analogue phone, you can call any extension free of charge by dialling the internal phone number. You can call an external number after seizing an outside line. To do this dial 9 to get an outside line and then dial the telephone number required.

If you set "spontaneous exchange line seizure with internal " for your telephone extension then you must press the hash button before the internal phone number. Note in this mode you cannot call an extension if your phone is an older LD or rotary type dial phone.

To carry out system functions, your phone must have a STAR Button (*). The sequence to enter will be * followed by the function number. If your phone is an older type LD phone then you can dial 99 instead of * .

To make an enquiry call your phone must have an R Button (Recall Button). The signalling for this must be set to Timed Break Recall (TBR). On older rotary dial phones you do not need to press the R Button when making an enquiry call. System functions such as last number redial, abbreviated dialling etc, can be carried out from any LD phone.

You can also use the functions of a standard analogue telephone (e.g. redial, abbreviated dialling) in conjunction with your telephone system. Please refer to the operating instructions for the telephone concerned for details of these functions.

Details of how to operate the functions of your telephone system that you are able to use from a standard analog telephone set to DTMF are given in the instruction manual.

Each programming entry will be acknowledged by a confirmation tone. If this tone is not received or if an error tone is returned then you must repeat this entry.

Please ensure that your provider has disabled meter pulses to avoid any interference on your phone calls.

For data transfer via the analogue ports, the telephone system supports the V.90 standard (up to 56600 bps, a reduction in speed is possible due to transmission path and cables used, down to 28800 bps V.34). When operating a modem, it is imperative to configure the modem to blind dialling because most modems do not detect the dial tone of a telephone system. On modems that operate with the Hayes command set, blind dialling is set by means of the X0..X4 parameters

Introduction

Pictograms And Buttons

All operations and functions of the telephone system are explained in clear and easy to follow pictograms.

Pictograms

	Ringer		Conduct a call
	Pick up receiver		Replace receiver
	Dial Phone or Code Number		Conference
	Acknowledgement tone		Room monitor

Buttons

	Recall Button		Star Button for functions
	Number Button for entering digits, e.g. „9“		Hash Button to dial extension when automatic line seizure is active

LED´s Of The AC 14 Analog

LED 1 LED 2 LED 3

Permanently lit

LED 1 (red)	System is operational
LED 2 (green)	System connected to the phone network
LED 3 (green)	System is connected to the computer via USB

Flashes

System being initialised
Inward or outbound call
Data being transferred

Introduction

Fax Switch

A fax switch is a device or feature of a device that recognises the difference between telephone and fax calls. The fax switch automatically forwards telephone and fax calls to the correct extension.

Your "AC 14 analog" is fitted with a fax switch which you can set conveniently in TK Suite or via a programming procedure (see page 10).

You have the option of choosing between 3 operating modes: Active, Passive or Inactive.

ACTIVE:

If you set the fax switch to "Active", the PBX takes an external call, checks whether it is a fax and then forwards it to the default extension if required.

PASSIVE:

If you set the fax switch to "Passive", the fax switch checks all calls in the background which have already been taken by a telephone or an answering machine. If the call is a fax, it is then forwarded to the default extension automatically. The extension which took the call originally will automatically receive a busy tone.

INACTIVE:

The fax switch is disabled.

Note

In 'Active' mode, the fax switch will answer all incoming calls automatically on the second ring and then will ring the relevant extension phone. Please note that in this mode the incoming caller will be charged for the call. This is regardless whether the caller was able to speak to the relevant extension. During this connection process the caller will hear a system generated ringing tone, this may differ from the normal exchange tone generated.

Installation

Check Delivery Contents

- 1 PBX System
- 1 230 V-Power Pack
- 1 connection cable to analogue exchange, length 1,5 m
- 1 PC-USB connection cable, length 3 m
- 2 plugs and screws
- 1 manual
- 1 CD-ROM with TK-Suite

connection to analogue network

Installation

Select Location

Install the System in a dry room free of any hazardous materials. Avoid sites near air conditioners, radiators, equipment with excessive high radiation, direct sunlight, excessive dust and the danger of liquid spillages such as water or chemicals.

Ambient temperature 5C to 30 C. Max humidity 70% non condensing.

The distance of the equipment to other objects such be considered to guarantee an air circulation. The minimum clearance distance of 50 cm should be adhered to. The distance of the system to the mains socket and the telephone network socket should not be more than 1 meter. (Length of mains cable 1.20 m)

It must be made possible to place a Laptop or PC near the telephone system for programming.

Mains Socket

On power failure the PBX System is without function.

Use the provided Power Pack only. Model No.: TST 1100468

Safety Notice

The telephone system is for the connection to an analogue line.

You may connect any analogue apparatus to the system which you are allowed to connect to the Public Switched Telephone Network (PSTN).

Any other use of the system which does not comply with the aforesaid is prohibited.

The system has a General European Connection Licence.

- The system conforms to the specified conformity and safety regulations.
- Warning! The telephone system must have a functional electrical earth.
- DANGER! Please disconnect the apparatus from the mains socket before connecting extensions and lines to it.
- Do not connect or disconnect any lines during a thunderstorm.
- Install all cables so that no one walks or trips over them.
- Ensure that no liquids can enter the system as otherwise short circuits maybe the result.
- No liability will be accepted for consequential loss or damages such as call charges for unintentional calls or connections.
- No calls can be made during a power failure. We would suggest to install surge protectors to all lines or extensions which do not originate within the main building.

Installation

Connect Analogue Extensions

You may connect up to four analogue apparatus to the system which have been approved for connection to the public switched telephone network.

a/b-Apparatus is:

- Telephone (2 wire Phone or POT) either LD or MF Dialling with Timed Break Recall (TBR) (60 – 800 ms)
- LD Phones may only have limited feature access.
- Fax machines Group 3
- Telephone Answering Machines
- Modem 56k (V.90 to 56600 bps, may reduce to 28800 bps due to quality of lines V.34)

Connect the analogue apparatus via 2 wires to the a and b wire (Speech Pair) of the system port

Wall Mounting

- Mark two vertical drill holes 92 mm apart on the wall.
- When marking the drill holes, make sure that there are no concealed lines at these points (gas, water pipes, electric cables or similar).
- Drill the two holes.
- Insert the wall plugs so that they are flush with the wall.
- Screw in the two screws leaving the head protruding by about 4 mm.
- Hang the telecommunications system on the screws and pull it down on the wall until it snaps into place.

Connecting Extensions To Separate Sockets

If you want to connect your extensions to separate sockets, you will find the connection panel for the plug-in extensions on the underside of your AC 14 analog. Unplug the power pack from the 230 V mains socket before working on the connection panel. The assignment of the extension connections is displayed on the connection panel. To ensure perfect functioning of the telecommunications system and the connected extensions, you should connect the terminals either to the sockets or the plug-in terminals! This means that if a extension is connected directly via a socket, e.g. connection 1, no second device should be connected via the terminals at the same extension connection, e.g. La1/Lb1. The connections La and Lb of the plug-in extensions are connected with connections 1 and 2 of the separate sockets. You can use commercially available telephone lines for the connection. We recommend: Telephone lines length between telecommunications system and sockets: max. 800 metres at 0.6 mm wire diameter.

Installation

Activate The FAX Switch

Start programming mode with:      (System-PIN)

PRO

 Inactive

 Active

 Passive

Lift receiver FAX switch activation

Acknowledgement tone Replace receiver

Continue programming or end programming:      

END

Continue programming or end programming:      

END

Factory Settings

- Incoming calls will ring extensions 11,12, 13 and 14
- Extension numbers: 11, 12, 13, 14
- External Line Access: Full access for all extensions
- External Line seizure: Spontaneous seizure with internal
- Day Service: No entry
- Night Service: No entry
- Call Waiting: Not enabled on extensions 11,12 and 14. Call Waiting is enabled for extension 13.
- Internal Call Forwarding: Off
- CLIP: On
- MoH: Internal
- Automatic Dial: Off
- Time Accounts: No Time Accounts set
- Disconnect on Limit reached: Off
- System-PIN: Not activated
- Clock: Not set
- FAX Switch: Inactive
- Terminal Types: Extensions 11 and 12 are set to telephone, extension 13 answering machine and extension 14 to multifunctional device.

Quick Reference

Making A Call - Spontaneous Seizure With Internal (Factory Setting)

External call					
	Lift receiver	External dial tone	Enter external phone number	Ringing tone	External Party answers, conduct call

The spontaneous external seizure (seize outside line) is only possible directly after lifting the receiver. If you want to make an external Enquiry during an internal call, you have to seize the external line by dialling **9**.

Internal call							
	Lift receiver	External dial tone	press hash-key	Internal dial tone	enter Extension number	Ringing tone	Extension answers, conduct call

Making A Call - External Seizure With "9"

External call							
	Lift receiver,	internal dial tone	Seizure with "9"	External dial tone	Enter external phone number	ringing tone	External party answers, conduct call
Internal call							
	Lift receiver,	internal dial tone	Enter extension number	ringing tone	extension answers, conduct call		

Internal Call Waiting

					
You are on a call and hear the call waiting tone		end the call	automatic ringing by the waiting party	Lift the receiver	conduct the call

External Call Waiting

				
You are on an internal call and hear the call waiting tone		Press R, the call is placed on hold	Fetch the waiting external call	conduct the call

Reject A Waiting Call

				
You are on a call and hear the call waiting tone		Press R, the call is placed on hold	Reject the waiting call	Continue your call

Quick Reference

Enter Wake Up Time

Lift receiver Enter Wake Up Time

Enter hour in two digits

Enter minutes in two digits

Acknowledgement tone

Replace receiver

After Entering the Wake Up Time, Wake Up call is activated for all days.

Set Wake Up Days

You can specify on which days the Wake Up Call will be triggered on your telephone after you have entered an alarm time.

Enter digits according to the following list

0 = all off

8 = Monday to Friday

9 = Monday to Sunday

1..7 = Monday .. Sunday

You can enter several days in sequence. If, for instance, you want to activate the Wake Up call for Monday, Wednesday and Friday, use the following approach:

Monday

Wednesday

Friday

After entering the Wake Up Days, Wake Up Call is activated for this days.

Switch On Wake Up Call

Lift receiver Code to switch on Wake Up Call

Acknowledgement tone

Replace receiver

Switch on Wake Up Call is needed, to reactivate a deactivated Wake Up call.

Receiving A Wake Up Call - Stop Wake Up Call

Lift receiver

Replace receiver

Switch Off Wake Up Call

Lift receiver Code to switch off Wake Up Call

Quick Reference

Receiving A Wake Up Call - Activate Snooze Function

After completion of the procedure 'Continue Wake Up Call' the phone will ring every 10 minutes for a one hour period.

 * 9 3 2 9		
Lift receiver	Acknowledgement tone	Replace receiver
Code to activate snooze function		

Set Time

Start programming mode with:  * P 7 R 7 O 6 (System-PIN)  

 * 8 4 6 7  Enter hours (two digits) 6  Enter Minutes (2 digits)  

Continue Programming or end Programming:  * E 5 N 6 D 3  

Set Date

Start programming mode with:  * P 7 R 7 O 6 (System-PIN)  

 * 3 2 8 8  Enter Day (2 digits) 6  Enter Month (2 digits) 5  Enter year (two digits)  

Continue Programming or end Programming:  * E 3 N 6 D 3  

Show Time

You can have the time of day displayed on a CLIP telephone. After completing the procedure, the time is shown for up to 60 seconds – depending on the type of device used - on the display of the telephone that has been hung up. While showing the time, the displaying telephone rings.

 * 8 4 7		
Show time	Acknowledgement tone	replace receiver

The time is shown up to 60 seconds on the display

Time Accounts

You can set up a time account for external connections for each internal party. Furthermore, you can specify what should happen when the time limit is reached for each party: should the internal party be allowed to finish outside calls without being cut off, but not be allowed to make any more external calls, or should the call be cut off immediately. The party will first be allowed to make external calls again when the time limit has been cleared. Exception: the direct number can still be called after the time limit has been reached.

Time accounts are protected by a special PIN (Personal Identification Number).

Delivery status: PIN - No entry, Time Limit - No entry, Disconnect on limit reached - Off.

Quick Reference

Time Account Menu Start/Stop

You can protect access to the time account menu by entering a 4-digit account PIN. If you hear the engaged tone on entering the menu, enter the account PIN. If you hear a short confirm tone, no PIN has been set for this time account. If you have forgotten the Account PIN, you can change it on your PC in TK Suite Set (Security Properties/Code Digits). If the time account is initiated, you hear a special dialling tone when you pick up the receiver.

Communication via PC

Establish An USB Connection

You may connect the telephone system with a PC or Notebook via the USB connection.
(Not supported with Windows NT 4.0)

1. Take the supplied USB Cable. You will identify this on the USB Symbol on the plug.
2. Plug in the square plug of the USB cable into the USB socket of the telephone system
3. Plug in the flat plug of the USB cable in one of the USB connections of your computer
4. Switch on your computer
5. On start-up of Windows with the telephone system, you will be requested to enter the location of the driver.

IMPORTANT! It may be that during the installation you will be asked to insert the CD of the operating system. Therefore it will be advisable to have this CD to hand.

6. Once the PC has identified the connected telephone system, the hardware assistant will be displayed. The hardware assistant will install the software for the new Hardware components [AC 14 analog]. Click on "next"
7. In the following dialog window select find "suitable driver" for hardware (recommended).
8. Enable the option "CD-ROM Drive" and de-select all other check boxes. Insert the CD "Communications Software" with the USB Drivers in the CD-ROM drive and click on "next".
9. After the driver has been found click on next to start the installation.
10. Drivers being installed
11. Insert the Operating System CD if asked to do so, to install the USB support. After the software has been installed click on "finish".
12. Restart your computer to complete the installation.

Configure Your AC 14 analog

You can configure your AC 14 analog with a few mouseclicks, after connecting it to a PC:

- Start "TK-Suite Mini" on your AGFEO CD.
- Set Interface to "USB direct connection"
- Click on "Get and edit PBX configuration"
- Edit the configuration
- Click on "Send Configuration" to send the configuration to the AC 14 analog
- If you want to revert to the latest configuration, click on "Revert to latest sent configuration".

Use TK-Suite Basic to make full use of all the features of your AC 14 analog, such as CTI, Call Filters or editing the Phone Book.
